Software Projects

And-Or Graph Library (C++11 & Boost) [https://github.com/MarkFzp/and-or-graph-lib] — VCLA, UCLA
- *a machine learning library used as the code framework for graduate course CS266B (Stat. Computing and Inference) at UCLA*
- *used by about 50 people in the lab*
- 2nd major contributor, 6000 lines of C++, co-led the 3-month full-time software development
- Implemented, optimized and debugged several learning, search, parsing and graph algorithms, including Monte Carlo tree search, greedy search, beam search, backtracking, Metropolis-Hastings algorithms, Earley parser, and graph compression
- Used C++ techniques like templates, smart pointers, multi-index containers, functors and self-defined hashing
- Boosted the model performance from 0.64 to 0.80 in terms of F1 score

Mind Palace (Java & SQLite) [https://github.com/KeplerC/Mind-Palace] — LA Hacks 2018
- *an Android app to help people with Alzheimer's diseases*
- Built by using Google Cloud's Vision and Natural Language pre-train models through REST APIs to search
- Sorted related images and texts stored on the device given photos and keywords based on similarity score
